Email: hao032@e.ntu.edu.sg /whsw77@gmail.com/18905171558@163.com

EDUCATION

8/ 2025 – present	Nanyang Technological University, Singapore Computer Control and Automation Average (CGPA): 4.57/5 Core Courses: Computer Control Systems, Genetic Algorithms & Machine Learning, Robotics and Intelligent Sensor, Video Signal Processing, 5G Communication and Beyond
9/ 2023 – 6/ 2025	City St George's, University of London, United Kingdom Electrical & Electronic Engineering (Avionics & Control) Average: 88/100 Core Courses: System Modelling and Control, Mechatronics, Avionics and Flight Dynamics, Computer Science and Programming, Signal Processing and Communications, Digital Design, Microelectronic Circuits and Devices Award: Graduate with First Class Honours
9/ 2021 - 7/ 2023	Nanjing University of Aeronautics and Astronautics, China Automation (Avionics & Control) Average: 82/100 (3.2/5) Core Courses: Digital Circuit and System Design, Analog Electronic Technology, Basic Computer Hardware Technology, Circuit, Electronics, Python, Mathematics, Physics

ACADEMIC PROJECTS

6/2025	BEng Individual Project Quantifying Blood Pressure from PPG Signals Using Algorithms • Conduct Signal pre-processing and feature extraction on PPG signal • Employ LightGBM and Hybrid CNN-LSTM machine learning model and deep learning model for blood pressure prediction • Apply SHAP method to analyse model interpretability and feature contributions
--------	--

INTERNSHIP EXPERIENCE

6/2024 - 7/ 2024	COMAC Shanghai Aircraft Design & Research Institute Shanghai Intern of Flight Control Systems Department • Learned about large aircraft development and basic work methods for civil aircraft flight control systems • Assisted in foundational theoretical algorithm research for flight control systems, independently derived theoretical formulas for inertial parameter correction algorithms, and conducted simulation analysis and engineering verification based on experimental data • Supported typical laboratory tests for flight control systems
------------------	---

ACADEMIC COMPETITION

5/2022	“JIMU” Robot Combat Competition Nanjing Team Member • Constructed decomposition and design of the robot structure • Designed and built the robot's combat structure • Programmed Arduino code for the robot's tracking and obstacle avoidance modules
--------	---

SKILLS and CHARACTERISTICS

Language	Band 7.5 in IELTS, Strong English writing and oral ability
Programming	Experience in Python and MATLAB programming, ability to solve practical problem
AI Ability	Experience in Machine Learning and Deep Learning models, ability to build, train and tuning
	Strong logical thinking and learning abilities, with a high level of resilience to pressure.
	Good interpersonal communication skills and teamwork abilities
